

Chapter 3: Linear equations

3.1 Solving $ax + b = c$

To solve $2x + 3 = 11$, subtract 3 from both sides: $2x = 8$.

Then divide both sides by 2: $x = 4$.

Always do the same thing to both sides of the equation.

3.2 Practice

1. Solve $5x - 2 = 18$
2. Solve $3(x + 1) = 21$
3. Solve $x/4 + 2 = 5$

Answers: 4, 6, 12
